

Professional Defect Report - BUG_001

Bug ID	BUG_001
Title	Cart total does not update when product quantity is changed
Module	Shopping Cart
Severity	High
Priority	High
Status	Open
Environment	Windows 11 / Google Chrome (Latest Version)
Frequency	100% Reproducible

Business Impact

Users may see incorrect cart totals, leading to inaccurate order values, customer confusion, abandoned purchases, and potential revenue loss.

Preconditions

User has a product in the shopping cart with quantity set to 1 and unit price of \$20.

Steps to Reproduce

1. Navigate to the shopping cart.
2. Verify the product quantity is 1.
3. Verify the cart subtotal is \$20.
4. Change the quantity from 1 to 3.
5. Click Update Cart (if applicable).
6. Observe the cart subtotal and total.

Expected Result

The cart subtotal and total should recalculate based on the updated quantity. A product priced at \$20 with quantity 3 should produce a subtotal and total of \$60.

Actual Result

The product quantity updates from 1 to 3, but the cart subtotal and total remain at \$20.

Root Cause Analysis (Hypothesis)

The quantity update event appears to modify the quantity field successfully, but the cart pricing calculation is not triggered or the total is not refreshed on the UI.
